# Group Project

## Objectives:

Objective of this group project is to conduct a thorough research on any of the latest trends related to project management as a group, study the trends through all publicly available secondary resources (blogs, research articles, industry reports, company use cases etc.) /primary resources ( company visit, practitioners interview etc.). A secondary objective of this activity is to practice academic research reporting. Since, this is group activity, the weightage of the work is significantly high ( number of members * individual weightage). You are free to choose any research article template to publish your research/project report. All these works will be part of your end term examination syllabus. Listed below some of the suggestive topics, however team can decide any new trends or out of the box topics that are contextual to broad "project management".

## Deliverables:

There are multiple deliverables associated in this component. These are detailed below:

1. **A detailed project report** at the end of the term but a week before the end term start. This is expected to be a word document. Ensure that you have cited all sources both in the body of the report as well as at the reference sections. References to any pictures or graphs also should be cited and given due credit. If at any point it is found to be a merely AI generated document (humanized as well), the entire group will get zero in this component without any further discussion. Team is expected to discuss, think and convey independent views/recommendations as appropriate. (50 %)

2. **Provide multiple assessment questions,** short answer types (5-6) as well as MCQ's (15-20), along with solution key's related to your topic. The idea is to challenge your own preparation as well as other groups. You can submit this while submitting your project report. (20%)

3. **A presentation** of your topic on class. The idea is to inform the class about this trends and co-learn. Cross questions and strong debate is heavily encouraged and will be awarded. It is NOT expected that a detailed report (document) to be ready before the presentation. This presentation will start from first week after mid-term break. (30%). All members of the team should be present during the presentation.

## Weightage:

Approximate weightage of each components of the deliverable is given in earlier section. In case there is any complexity or issues related to team dynamics faculty may interact with individual members related to the topic of choice.

**Tentative Topics:**

(NO two teams should choose same topics without consulting with faculty)

These are some tentative topics but participants are free to choose some other emerging trends related to project management.

1. AI & Machine Learning Integration
2. Hybrid Methodologies (Agile + Waterfall) or anything else
3. Integrating sustainability to conventional project management
4. Cybersecurity as an integral part of project management
5. Emotional intelligence in Project Management
6. Digital Twins & Virtual Project Simulations
7. Change Management in the era of AI/ML
8. PMO 2.0: Future-Focused Governance
9. Social Project Management (Ambient Awareness)
10. Low code or No Code, the new era of Project Management
11. Managing projects during disaster (Disaster management as a project)

# Individual Project

Objective of this individual project is to give participants a hands on experience about writing a detailed project plan. Participants are expected to choose a project of his/her choice from any domain. The choice should qualify as project due to its specific characteristics as discussed during class. The project can also be a hypothetical one, subject to the fact that a detailed requirements can be captured.

After the project topic is chosen, the participants are expected to write the detailed project plan, as we navigate different aspects of project management in our class. They are free to discuss during this interim period if they face any show-stopper or doubts with prior appointment. Participants are free to choose any open template to write the detailed project plan or create own template. All necessary components of a project plan should be included in this document.

**Some of the indicative headers (but not limited to) are listed below:**

1. Project name, manager name, registration id, etc
2. Project scope ( can embed as a separate document)
3. Requirement specifications ( can embed as a separate document)
4. Estimations and rationales (detailed budgetary calculations)
5. Project timelines/milestones and baseline scheduling
6. Project resourcing and loading plan
7. Project governance (reporting structure, roles and responsibilities if any, escalation matrix)
8. Risk assessments and mitigation strategy
9. Closure conditions
